

ArgusRAG Sample Paper

This paper studies a classification task for scientific document retrieval. We train a m

The primary objective is the cross-entropy loss, which measures the discrepancy bet

The model is trained with minibatch gradient descent. Each update uses the average

Figure 1. Training loss curve

Experimental setup

We evaluate the system on a benchmark of retrieval questions. The query encoder p

Figure 1. Training loss curve

The training curve shows a steady decline in objective value over the first 20 epochs.

Summary: the loss function is cross-entropy because it directly encourages the mode
